

## TERMINAL MODIFICATION

This 175,000 square foot project required a complete renovation and expansion for American Airlines in the Central Terminal Building.

New ticket offices were constructed on the departures level, and the check-in area was expanded and renovated with the installation of new granite floors, a coffered drywall ceiling, new lighting and new ticket counters.

Additionally, the baggage claim area was renovated requiring extensive demolition, new granite floors, walls, architectural ceilings and lighting, and new conveyors and carousel.

The concourse was refinished with a new porcelain tile floor, new plastic laminate wall finishes and a new ceiling with holdrooms being expanded on both sides of the concourse. New HVAC systems were installed and sprinkler, fire alarm, communications and life safety systems were upgraded.

Three elevators were installed, with two providing access to the new 15,000 square foot Admirals Club and Business Center.
